

CAMERON RECEIVES ENABLING GREEN EXCELLENCE AWARD

Cameron's Centrifugal Compression division is proud to announce the awarding of the Frost & Sullivan Green Excellence award. Frost & Sullivan is a research program that recognizes companies in a variety of regional and global markets for demonstrating outstanding achievement and superior performance in areas such as leadership, technological innovation, customer service, and strategic product

development. Industry analysts compare market participants and measure performance through in-depth interviews, analysis, and extensive secondary research in order to identify best practices in the industry.

The Frost & Sullivan Enabling Green Excellence Through Customer Value of the Year Award in the centrifugal air compressors industry is presented to a company that has demonstrated a concerted initiative towards envisioning and implementing a strategic framework for institutions, communities and nations at a global level to adopt sustainable and environmentally conscious practices. Frost & Sullivan's team of analysts track companies across all industries, and assess their individual green initiatives. Award recipients are selected only after vigorous research is performed.

This Award signifies the company's urge to establish a conscientious momentum among policy makers, organizations and advocates of green awareness worldwide to arrive at result-oriented environmental management objectives, documented systems and implementation guidelines to reduce ecological footprint in the habitat.

Frost & Sullivan, the Growth Partnership Company, honored recipients on September 17, 2009, at its Growth Excellence Awards Banquet, held in Scottsdale, Arizona.
